

Capstone Project Library Management System

- by Sakthish J Nadar

Key Takeaways/Learnings from this Training

- Mention all the key learning you had in this training
 - The key learnings I had in this training:
 - Learnt ASP.NET Core, MVC, Web API and C# Console Apps,
 - Understood coding conventions,
 - Front-end implementation using Angular, and HTML/CSS,
 - SQL/LINQ/ADO.NET,
 - Clean Architecture,
 - Structured programming,
 - State and memory management
-
- A great learning and training session to start my career as an ASP.NET Software Engineer.

Problem Statement of the Capstone Project

Short Description of my problem statement,

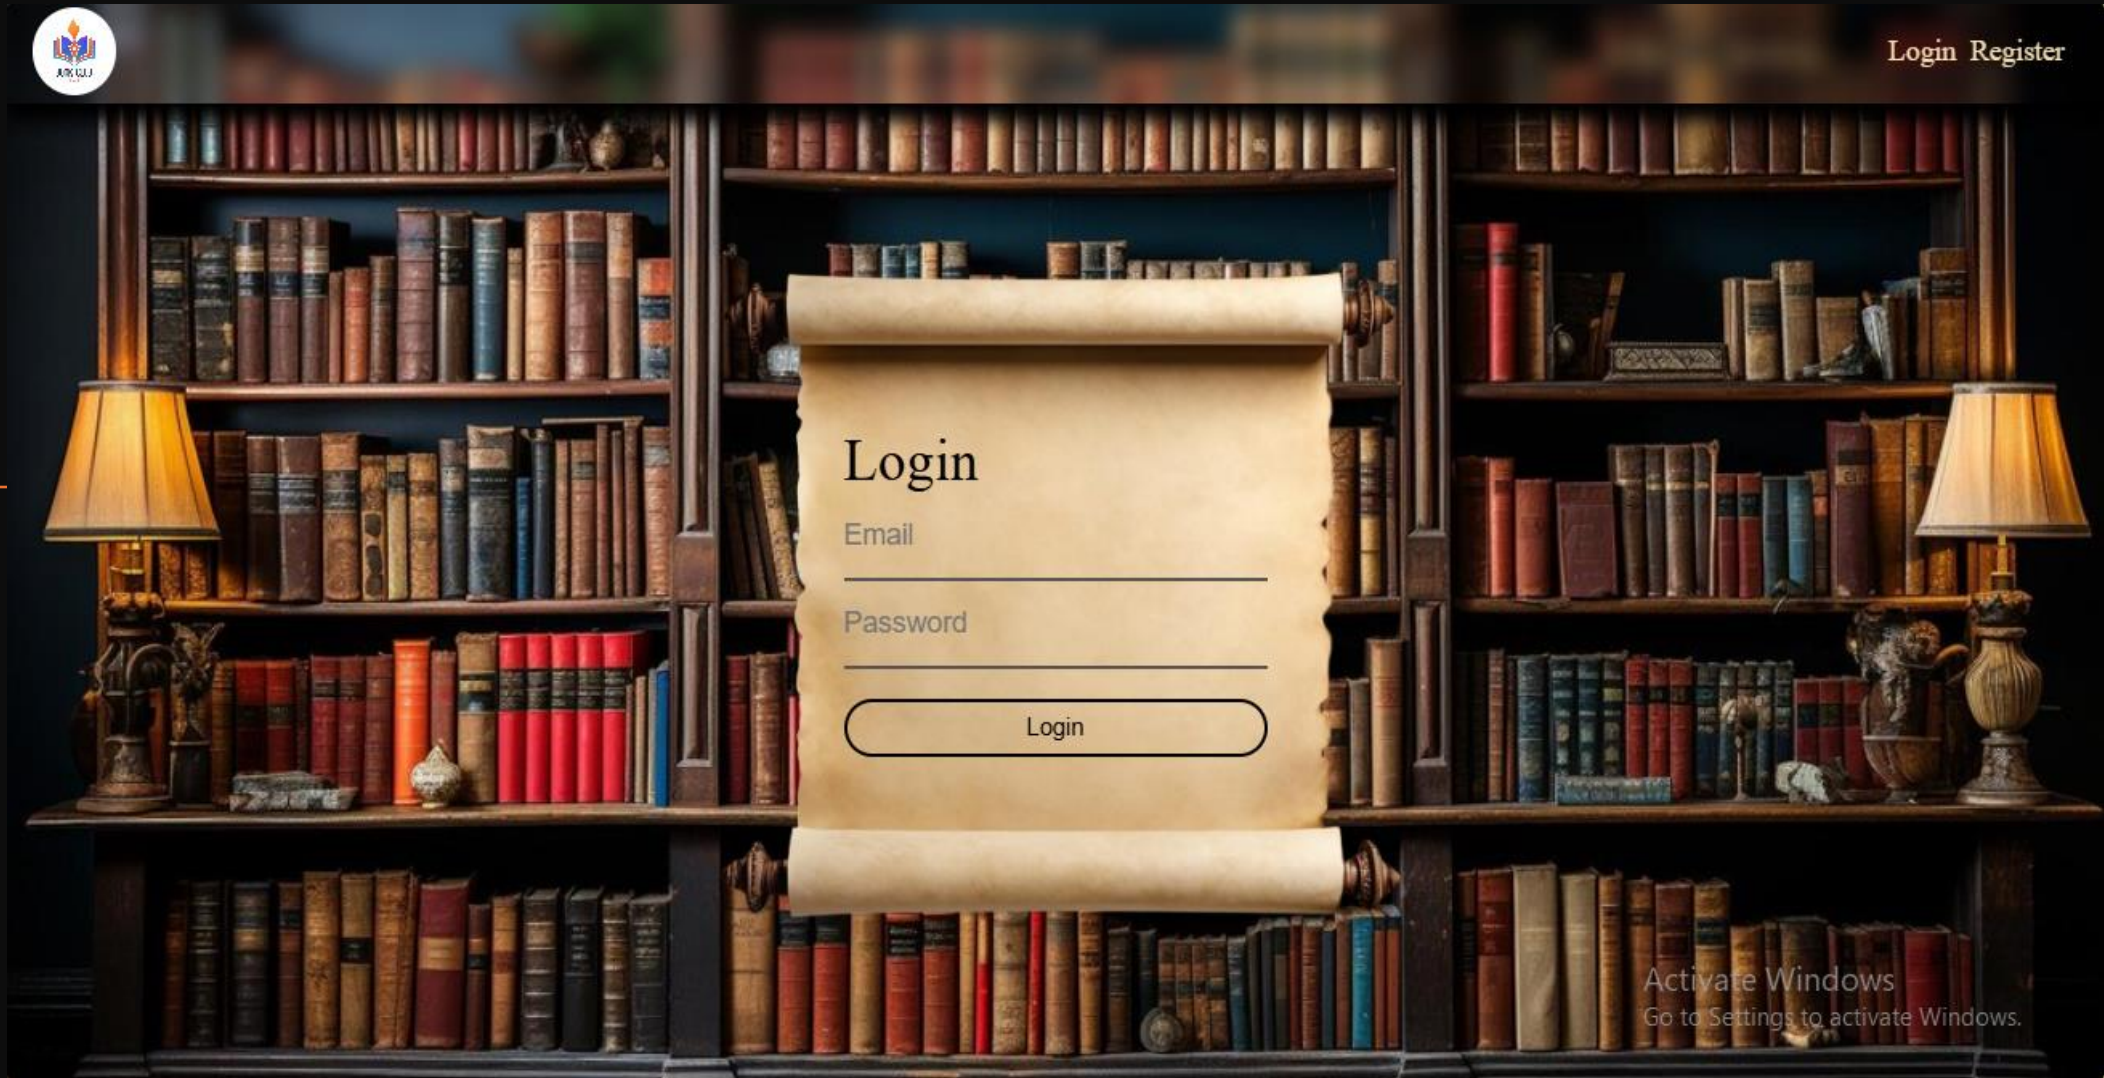

- This Library Management System Web app helps the librarian maintain who rents the book .
- All users registered are authenticated and authorized.
- It consists of Interactive User dashboard with retro design for eye catching experience.
- User can rent books of various genres.
- They can check which books are available which are rented by Him/Her and also can check borrow request status.

TechStack Used:

- ASP.NET Web API (Version 8)
- Postman/Swagger
- C# (Back-end)(Version 12)
- JWT (For authentication & authorization)
- Angular(Front-end)(Version 18)
- Local SQL-DB(SQL-SERVER)
- HTML and CSS for styling

DEMO**

Conclusion

- This Online Library Management Web App provides users a quick way to rent tickets online.
- It helps them to login easily and have easy access to the different genre of books from anywhere.
- The application is also authenticated using JWT security token.
- Clean UI experience is provided
